

Scandinavian Timber -
a natural choice for you

THE PERFECT PARTNER FOR TIMBER AND ALUCLAD WINDOWS

THE BEAUTY OF TIMBER

Timber remains one of the most beautiful and natural materials on earth. Its appearance, its feel and the sense that it is entirely natural, hold timeless appeal for the discerning homeowner and makes timber windows and doors the natural choice. Against some of the other competing man-made materials timber always comes out on top for those who value natural resources and natural beauty. Sourced from certified Programme for the Endorsement of Forest Certification (PEFC) producers, all Norwood Windows and Doors come with a guarantee of the highest quality and a promise that the greatest concern for the natural environment in which we live has been demonstrated at all times.

Norwood Windows in the UK is a wholly owned division of timber window and door company Fjerdingsstad, one of Norway's most respected companies, established in 1959 and among the leading timber and AluClad window and

door manufacturers in Europe. Their technical expertise and manufacturing standards make the Norwood Windows product range the perfect choice for home-owners in the United Kingdom.

THE BENEFITS OF ALUCLAD

Adding more benefits to our outstanding range of timber windows and doors is the opportunity to add an AluClad option to the external face.

WHAT DOES THIS MEAN?

It means that our windows and doors can have aluminium 'flashings' fitted to their external face to provide an ultra-modern sleek appearance in a vast range of RAL colours. When fitted alongside the natural beauty of the timber internally it provides the homeowner with a best of both worlds option. AluClad is low maintenance and extremely durable.

Not all ironmongery options shown in this brochure are guaranteed to be available in all countries; we reserve the right to update specifications as part of our continuous product development programme.

ENVIRONMENTAL

All Norwood windows and doors are manufactured from sustainably sourced engineered PEFC certified softwood timber. Our commitment to the environment is unwavering; it has been the corner stone of our business since we first began manufacturing and we are constantly looking at ways in which we can further enhance our partnership with nature.

MANUFACTURING

Our ultra-modern manufacturing plants produce windows and doors to customer's specific requirements including to their individual choice of styles, colours, handles and glass. Our production processes are all fully accredited to ensure the highest finished quality at all times and comply with all relevant legislation and standards.

AESTHETICS

It is important that our windows and doors are more than just environmentally friendly and manufactured to the highest quality – they also need to be aesthetically pleasing on the eye, and our beautifully crafted slim-line frames are just that. When you choose windows and doors from our extensive range of products you can be sure you will be delighted with how they look.

COLOURS

As well as the vast range of styles we produce, we offer all our windows and doors in the widest range of recognised RAL colours on the market – your home, your windows and doors, your choice of colours!

VENTILATION

As an accompaniment to an enhanced life-style experience, window ventilation is essential. Allowing the free flow of air into and around the home can significantly enhance your sense of well-being.

SECURITY

Security remains of paramount importance to homeowners. A sense of safety and feeling secure has long been at the top of people's wish-lists when it comes to buying new windows and doors, and all Norwood windows and doors can be specified to meet the latest exacting security standards. All our products comply with the most up to date standards including the option to specify the police preferred SECURED BY DESIGN accreditation.

GLASS

Our windows and doors are available with an array of glass specifications including clear – for most applications – and patterns. Choose between double or triple glazing to satisfy individual thermal requirements for your home. We also offer a range of astragal bars to give that added effect to your new windows and doors.

TOP SWING

Top Swing windows come with a range of features enabling the inclusion of extra-large sashes to allow swathes of natural light into the home. Opening sashes reverse fully outside your home and without interfering with your valued possessions on the window sill. Top Swing windows include a sturdy restrictor for safety and to allow fresh air to circulate around your home.

TILT AND TURN

Tilt and Turn windows have been popular in the United Kingdom for over 40 years, and their dual functionality, including a tilt position for ventilation and a turn position for full opening and cleaning from the inside remain as popular today as at any time. Large sashes enable natural light to permeate the home and their robust single handle operation mark them out as a popular choice among homeowners.

Side Swing

Side Swing windows offer the same features as their sister product the Top Swing for cleaning, safety, security and ventilation with the only difference being that they open like a traditional side-hung window rather than a top-hung.

FIRE RATED WINDOW

Fire rated windows are available as a single opening Top Swing or as multi-light fixed panes rated for 30 minutes.

BASEMENT WINDOW

Our basement window is a top-hung double-glazed window designed to be used in this specific application. It opens out using a butt-hinge and wire stay arrangement and offers the same slim sightlines as all our other products. They can be provided in single or dual colour options to meet customer requirements.

FIXED WINDOW AND SHAPES

For those looking to add a design feature to their home we offer a range of fixed window shapes to allow large areas of glass to bring swathes of natural light into the home, and to deliver outstanding thermal performance. Our fixed and shaped windows can be made to most designs.

GARAGE WINDOW

The garage window is designed as a lesser thermally performing product. It is supplied as a fixed frame with single glazing and offers the same slim sightlines as all our other products. They can be provided in single or dual colour options to meet customer requirements.

SINGLE DOOR

Our inward or outward opening doors allow functionality, ease of access and come with robustness built in as standard. Available fully glazed, half glazed or with a part or full panel they offer something for every home. With high levels of security built in as standard you additionally have the option to request the police preferred specification SECURED BY DESIGN.

FRENCH/DOUBLE DOORS

French Doors remain a popular choice for those with the space for a double door opening for their home. Stylish designs, and with the option to add fixed sidelights means French Doors are a great choice for homeowners.

PATIO DOORS

Available in two, three or four pane designs with up to two opening sashes, Patio Doors remain a firm favourite with homeowners. Allowing for a glazed expanse of up to nearly six metres wide whilst remaining super smooth in operation, these doors can bring your home and garden together on those sunny days and special occasions. Perfect for new-build applications or ultra-modern extensions, these doors add a lifestyle dimension to any home.

BI-FOLD DOORS

The Folding Door, or Bi-fold door as it is often called, allows for expansive openings to be created in new building designs or within home-makeover projects. They allow you to bring the outside in.

This door style allows for up to eleven sashes in combination as a full traditional folding door arrangement, or with a single independent door to enable easy access to the home without the need to fully open all door leaves.
